New generation of eco-friendly lanterns

Premium material quality - Sustainable manufacturing approach - Wide range of models - Tailored to market needs

For over 30 years, we've been creating products from recycled materials, blending tradition with innovation. Our Ecolant, the first lantern made from fire-resistant paper is now an internationally awarded symbol of sustainability.

Quality

Our products undergo strict quality control at every stage of production. Quality is the foundation of the trust we build with our customers.

Innovation

Each of our new products is born from the idea of making the world a better place. Ecolant is the result of that mindset — simple, yet revolutionary.

Sustainability

More than 95% of the raw materials we use come from recycled sources. Sustainability isn't a choice — it's our everyday standard.

Technology

Our production is powered by solar energy and modern equipment. Technology enables us to achieve efficiency without compromise.

Traditional value, modern responsibility

Whether you choose classic PVC lanterns or those made from recycled paper, each of our lanterns is crafted with care, quality, and respect for the environment. We combine years of manufacturing experience with modern technological solutions to offer products that last—and leave a positive mark.
